Architecture layer decisions, confidence scores, and rationale

SCENARIO CONFIGURATION

Cloud	azure	Maturity	intermediate
Deployment	cloud_managed	Users	2,500
Sensitivity	confidential	Timeline	12 months

ARCHITECTURE LAYER SCORES — OVERALL 83/100

Layer	Score	Confidence	Score Bar
Cloud Foundation	85/100	88%	
Compute / GPU	83/100	88%	
Storage	85/100	88%	
Data Platform	82/100	88%	
Model Layer	82/100	88%	
RAG / Vector Layer	82/100	88%	
Orchestration / Agent	82/100	88%	
Observability	84/100	92%	
Security	84/100	92%	
Identity	81/100	92%	
API Layer	84/100	88%	
Network / Connectivity	82/100	88%	

TOP ARCHITECTURE DECISIONS — DETAIL

Cloud Foundation

85/100

azure Landing Zone with Enterprise-scale architecture

azure is your preferred hyperscaler, offering mature AI/ML services, enterprise support SLAs, and native identity federation.

Storage

85/100

Azure Blob Storage + Azure NetApp Files

Tiered object + high-performance file storage ensures low-latency model weight loading and cost-effective bulk data retention.

Observability

84/100

Azure Monitor + Application Insights

Full-stack observability with LLM-specific metrics (token cost, latency, hallucination rate) and distributed tracing for AI pipelines.

Security

84/100

Microsoft Entra ID + Defender for AI + Purview

Enterprise security baseline with RBAC, MFA, and audit trails across all AI workloads.
